Education

Bachelors of Science in Cybersecurity and Information Assurance

Western Governors University
Jan 2023 – Dec 2024

Experience

Freelance Software Engineer – *Independent*

Dec 2024 – Present

- Developed full-stack web platform for a startup company - MotorCity Junk N Movin LLC, consisting of a company website and a secure admin dashboard. Designed UI/UX and implemented with Next.js and Tailwind CSS; and created RESTful APIs to connect to Firebase backend. Implemented CI/CD pipeline with GitHub and Vercel and used Cloudflare to configure custom domain with DNS records to securely integrate with Zoho mail for email hosting.
- Developed full-stack SaaS application that allows users to create custom YouTube Shorts with AI. Utilizes Next.js, Convex, Firebase, Docker, Ingest, Remotion, Google Cloud Platform, and numerous third-party AI platforms.
- Developed cross platform mobile application with React Native and Expo that allows users to view, upload, and register for events. Utilizes Firebase, Nile Postgres SQL, and Cloudinary.
- Developed simple CRUD blog web application with Next.js, using JWT for authentication and MongoDB for backend.

Crowd Manager – *Ilitch Sports and Entertainment*

Aug 2024 – Present

- Screen event attendees, ensuring great customer service while also enforcing security protocols to ensure compliance and safe entry.

Software Engineering Training Program – *Revature*

Jan 2025 – Mar 2025

- Trained in Java, SQL, RESTful API development, Spring, Git, as well as advanced OOP principles and software development methodologies.
- Completed 100+ coding evaluations and developed two scalable

Product Operator – *Stellantis*

Jun 2024 – Sep 2024

- Executed assembly tasks in a Kanban-driven workflow to support the daily production of 300+ vehicles with consistent speed and accuracy.

PC Workshop Volunteer – *PC Supply Company*

Jul 2023 – Aug 2023

- Replaced CMOS batteries and installed SSDs for used PCs with consistent documentation. Booted Windows on PCs with USB.

Certifications

CompTIA **PenTest+**

CompTIA **CySA+**

CompTIA **Project+**

LPI **Linux Essentials**

CompTIA **Security+**

CompTIA **Network+**

CompTIA **A+**

ITIL 4 **IT Service Management**

Skills

General: Computer Hardware, IT Security, Networking, Linux, Information Security, CLI

Frameworks: React.js, React Native, Next.js, Spring

Languages: Java, JavaScript, SQL, Python, Bash, CSS, HTML, C++

Databases: Firebase Firestore, MongoDB, Nile Postgres SQL, Convex

Technologies: Microsoft Office 365, Git, Cloudflare, Google Cloud Platform, Ingest

Projects

Windows PC Configuration

Installed individual components to build a PC. Updated BIOS, and booted Windows 11 from USB.

Spring Social Media Blog API

Used Spring Boot to create backend API that allows all CRUD operations. Implemented core OOP principles with a three-layered architecture, using SQL to write custom queries, and Java to implement business logic.

Password Security Automation

Proposed a solution that increases efficiency and reduces risk involved with IAM through automation. Outlined the scope, methodology, and timeline for the project. Created a password policy as well as Linux bash scripts (with documentation and unit tests) and reported results and implications.

Analysis Response Project

Analyzed Azumer Water security incident using the NIST CSF. Identified risks, proposed mitigation steps, and recommended technical controls. Designed a NIST-aligned security structure to enhance resilience and ensure business continuity.
